Index Asset Management of a Currency Portfolio

Index asset management involves creating an investment portfolio relative to a benchmark portfolio, which is a set of securities reflecting the investor's strategic interests. The return on the benchmark portfolio serves as a metric for assessing the effectiveness of investment portfolio management. The benchmark portfolio is based on indices developed and monitored by leading global financial companies or the National Bank of the Republic of Kazakhstan. In accordance with the strategic allocation of the foreign exchange portfolio, index asset management is applied to the developed market bond sub-portfolio, the emerging market bond sub-portfolio, the corporate bond sub-portfolio, and the equity sub-portfolio.

Index asset management is performed both by the NBRK itself and through the involvement of foreign management companies. The NBRK index manages the developed market sub-portfolio and part of the emerging market bond sub-portfolio.

The allocation of the foreign exchange portfolio of the UAPF PAs held under trust management by the NBRK as of December 1, 2025, is presented in Table 2.

Table 2. Strategic distribution of the foreign exchange portfolio of the UAPF PA as of December 01, 2025.

Investment Results

As a result of investment activities, as well as volatility in foreign exchange rates and changes in the market value of financial instruments, the accrued investment income since the beginning of 2025 has amounted to KZT1.65 trillion. The return on pension assets of the Unified Accumulative Pension Fund, distributed to contributors' (beneficiaries') accounts since the beginning of 2025, has amounted to 6.90%.

It is important to note that the return on pension assets for individual short-term periods is not an indicator of their management effectiveness, as income in the form of interest on financial instruments and other transactions accrued over a short period of time does not always cover fluctuations in the value of securities and exchange rates during a given period. Therefore, it is advisable to conduct an objective analysis of investment income over a period of at least one year.

The accrued investment income for the last 12 months from December 2024 to November 2025 amounted to approximately KZT2.23 trillion, yields for the period were 9.69%, with inflation at 12.40%.

In November 2025, financial markets experienced moderate volatility amid the US government shutdown throughout the month. Consequently, the publication of US inflation and non-farm payrolls reports for November was postponed. The market expects one cut in the benchmark rate by the end of 2025.

As a result, the yield on benchmark 10-year US Treasury bonds fell by 6 bps in November to 4.01%. Emerging market bond spreads widened by 11 bps, while corporate bond spreads remained virtually unchanged. Meanwhile, the MSCI World equity index showed a slight increase.

At auctions for Kazakh government securities in November, yields declined across the entire yield curve amid a significant increase in demand and the National Bank of Kazakhstan's decision to maintain the benchmark rate at 18%. Inflation slowed to 12.4% per annum (12.6% in October), while month-on-month growth was 0.8% in November (0.5% in October). Demand at auctions to place government securities of the Republic of Kazakhstan was strong, exceeding supply threefold, with the majority of demand concentrated in medium-term placements. Borrowing by the Ministry of Finance of the Republic of Kazakhstan increased in November compared to October, reaching 623 billion tenge.

The structure of accrued investment income for the specified period is presented in Table 4.
