Index management of assets of the currency portfolio

Index management of assets involves the formation of an investment portfolio in relation to a benchmark portfolio, which is a set of securities reflecting the strategic interests of the investor. The yield of the benchmark portfolio serves as a measure for assessing the effectiveness of investment portfolio management. Indices developed and monitored by leading global financial companies or the National Bank of the Republic of Kazakhstan are used as a benchmark portfolio. According to the strategic distribution of the currency portfolio, index asset management is applied to the sub-portfolio of developed countries bonds, the sub-portfolio of developing countries bonds, the sub-portfolio of corporate bonds and the sub-portfolio of shares.

Index asset management is carried out both by the NBRK independently and with the involvement of foreign management companies. The NBRK carries out index management of the sub-portfolio of developed countries and part of the sub-portfolio of developing countries bonds.

The allocation of the UAPF PA currency portfolio under the trust management of the NBRK as of June 1, 2025 is presented in Table 2.

Investment Results

As a result of investment activities, as well as due to the volatility of foreign exchange rates and changes in the market value of financial instruments, the amount of accrued investment income since the beginning of 2025 amounted to (-) KZT146.36 bln. The return on pension assets of the UAPF, distributed to the accounts of contributors (beneficiaries) since the beginning of 2025, amounted to (-) 0.69%. At the same time, the amount of accrued investment income for April and May 2025 amounted to KZT214.94 bln and KZT85.18 bln, respectively.

The main reasons for the negative investment income since the beginning of the current year are:

1) a decrease in the market value of government securities of the Republic of Kazakhstan due to an increase in their yields against the background of rising inflation and inflation expectations, as well as an increased supply of these securities from the Ministry of Finance; 2) strengthening of the tenge against the US dollar, which at the beginning of 2025 amounted to 525.11 tenge per dollar, and by the end of May - 510.81 tenge per dollar.

It is important to note that the profitability of pension assets for individual short-term periods of time is not an indicator of the effectiveness of their management, since income in the form of remuneration on financial instruments and other transactions accrued over a short period of time does not always cover fluctuations in the value of securities and exchange rates for a given period. Therefore, it is advisable to make an objective analysis of the amount of investment income for a period of at least one year.

Thus, despite short-term fluctuations in profitability, over the past 12 months from June 2024 to May 2025, the amount of accrued investment income amounted to about 2.60 trillion tenge, the profitability for this period was 13.08% with inflation at 11.30%.

In May 2025, financial markets saw increased volatility amid uncertainty over the US tariff policy and the downgrade of the US long-term credit rating from "Aaa" to "Aa1" by Moody's Ratings due to concerns about the growing budget deficit. At the same time, inflation showed signs of slowing down, and the labor market remained unchanged. Inflation in the US accelerated to 2.4% per annum in May (2.3% per annum in April), while the growth of monthly inflation slowed from 0.2% to 0.1%. The growth in the number of new jobs created in the non-farm sector remained stable in May and amounted to 139 thousand jobs, while the unemployment rate remained at 4.2%. By the end of 2025, the market expects 2 cuts in the base rate. As a result, the yield on benchmark 10-year US Treasury bonds increased by 24 bp in May. Emerging market bond spreads narrowed by 30 bps and corporate bond spreads by 18 bps, while the MSCI World equity index rose 6%.

At auctions for the placement of RK government securities in May, there was an increase in yields on the near and middle segments of the curve. Inflation accelerated to 11.3% per annum (10.7% in April), while slowing down in monthly terms to 0.9% in May (1.2% in April). At auctions for the placement of RK government securities, supply exceeded demand, while demand was evenly

distributed across all maturities. At the same time, the volume of borrowing by the MFRK in May increased by 16% compared to April and amounted to KZT744 bln.

The structure of accrued investment income for the specified period is presented in Table 4.
